*** Notes of Significance ***

Fires highlighted in yellow have submitted a FINAL ICS-209 or will no longer meet criteria to be prioritized

[illegible][illegible]

Evening Brief

Date: Friday September 18th, 2020

Weather Summary

*** High Risk for Gusty Wind/Low Humidity Saturday in Southern UT/AZ Strip ***

Low pressure and a cold front sweep across the Great Basin through Saturday. Stronger winds ahead of the front will move east and south on Saturday into eastern/southern Utah, the AZ Strip and far southeast Nevada. Wind gusts 30-45 mph and RH below 15% will occur in this region. See High Risk Matrix for details.

Further north and west behind the cold front, showers, thunderstorms and much cooler temperatures with higher humidity's that will occur across Idaho/Wyoming down into far northeast Nevada and northern Utah. The best chance for more widespread wetting rains will be up in Idaho/Wyoming. Snow levels will drop to possibly 8,500 feet in Wyoming for high elevation snowfall. Rainfall totals in central and eastern Idaho into Wyoming could range from 0.25-0.50"+ with lighter amounts over southern Idaho/Nevada/Utah.

Southwest flow continues into early next week, with high Pressure building back in the area by the middle of the week, with a return of warmer and drier conditions to Idaho and Nevada. But some moisture from Arizona is expected to move north into Utah, bringing clouds, and isolated showers and thunderstorms to the higher terrain by Mon/Tue next week. Winds will be breezy Sunday though Mon/Tue over parts of Nevada as southwest flow continues. This could bring more smoke into the region, depending on fire activity to our west.

Fuels/Fire Potential

***Fuel and Fire Behavior Advisory in Effect for West ID, East NV, Most of UT and the West Arizona Strip ***

Areas of wetting rains across Idaho into Wyoming and parts of northern Nevada and far northern Utah by Saturday, could significantly moisten fuels for several days. This moisture would have the greatest effect on fine fuels and 100-hr fuel moisture. However, larger timber fuels in some areas of Idaho may not respond significantly, depending on the amount of moisture. At a minimum, the rainfall and/or higher humidity for a couple days will be a brief reprieve for Idaho.

Otherwise, fuels will remain critical over the southern half of the Great Basin under drier conditions. Moisture by Mon/Tue in Utah may moderate fire danger and fuels in some areas.

Live Fuel moisture in low elevation brush remains critically dry, between 60-100% in most areas, which correlates with extreme fire behavior.

Preparedness Levels & Great Basin Fire Activity (from WFDSS)

Great Basin	PL 4	Light Initial Attack Activity
National	PL 5	New Fires and Acres: 15 fires for 22.5 acres. 10,433 acres Large Fire Growth

Resources:

Aviation within the Great Basin

- o 1 VLAT, 7 LATs, 2 CL-415
- o 23 SEATs, 1 FB, 14 AA, 2 ASM, 0 LP
